

Sekong Province, Lamam District, health education (Outreach)

The outreach activity was conducted in Paheungkang Village, Lamam District, Sekong Province. The activity was done within one day at the village level. Once the health education knowledge session provided, the team tested high-risk people, if positive, give treatment on the same day. Because of high interest, a lot of participants came to the activity, and there was questions and answers session at the same time. The gift was given to the participants who can give correct answers, and it serves as motivation for the people when conducting activities at the village level. Health education activity focused on children, adults, and pregnant women as well, but mostly focused on the forest people or people likes to stay overnight in farming to make sure malaria-free from them.

Phouvong District, Attapue Province, health education

Phouvong District, Attapue Province, health education activity was conducted in July 2019. The activity was conducted in areas where the high risk of malaria according to the monthly report. Many participants were interested in attending the event because people living near the forest to find foods frequently contracted malaria. Therefore, when we conducted health education, they were interested in attending. The team did not test all people who turned to the activity, the team selected the people who back from the forest, stay overnight in the farming or forest at least a night. The health education session is very important to conduct in the community because people very far from the city, and they could not access the information without health education activity. More importantly, children were also found to be positive as well because they played in the ground/land and also some children like to take off their cloth, becoming very easy for the mosquito to bite children.
